

Top Reasons to Specify FlowGuard Gold® Piping Systems

Safeguard Your Home Building Investment & Reputation with Proven FlowGuard Gold® Brand Quality

In an industry known for risk, it's good to know piping systems installed with FlowGuard Gold® Pipe and Fittings ends plumbing worries for home builders, general contractors, plumbers, and installers. There's nothing like it for reliability, performance, and value. Here's why:

1. 50 Years of Proven Performance.

FlowGuard Gold® Piping Systems are the gold standard for system performance. Billions of feet of FlowGuard Gold pipe and fittings have been installed in homes, condominiums, apartments, hotels and other structures, delivering safe and clean drinking water to people around the world while demonstrating a near-flawless performance record.

2. Industry's Top-Selling Non-Metallic Piping System.

Hundreds of your colleagues across the Americas endorse FlowGuard Gold's excellence by specifying and purchasing the product. It's a position of leadership that Lubrizol works hard to maintain by continuing to earn your trust and business.

3. A Lifetime of Benefits for Your Customers.

FlowGuard Gold piping systems are ideal for handling hot and cold chlorinated water. FlowGuard Gold pipe and fittings have excellent corrosion resistance from chlorine and chloramines that are used in North America to keep potable drinking water systems safe from bacteria and biofilms. FlowGuard Gold systems also have outstanding insulation properties which help maintain water temperatures.

4. Superior to Copper-Based Systems.

It's no secret copper is a costly product, subject to pinhole leaks, jobsite theft, and unwelcome price fluctuations. In many areas, copper is simply unsuitable for use with the local water supply, due to issues with water hardness, chloramines, and pH level.

5. Looks and Performs Like a Quality Piping System.

FlowGuard Gold systems have a professional installed appearance, giving the most craftman installer a sense of pride. Contrast that with the hose-like bundled look of a PEX (cross-linked polyethelene) system, an aesthetic that often disappoints homeowners. Also, FlowGuard Gold systems are easy to install with inexpensive tools and have excellent impact resistance during installation—making it a choice for building professionals.

6. Quiet and Dry Operating System.

Water running through a FlowGuard Gold piping system is far quieter than through copper pipe. The difference is the same as comparing the noise from a whisper to a washing machine in operation. The threat of condensation damage to walls, structures and belongings is also dramatically reduced by FlowGuard piping systems compared to copper.

7. Leading Manufacturers.

Alarming news reports about failures from inadequate building product suppliers are all-too common. The roster of FlowGuard Gold Pipe & Fittings manufacturers reads like a "who's who" of top North American companies, each carefully vetted for quality and integrity.

8. Many Specification Options.

What size pipe and fittings do you need? The FlowGuard family of pipe and fittings (including FlowGuard Gold and Corzan pipe and fittings) are available from ½-inch to 24-inches and produced to comply with all common building standards and codes.

9. Rapid Product Availability.

FlowGuard Gold piping systems are readily available from all leading building material suppliers.

10. Backed by a Top 5 Fortune 500 Company.

Lubrizol, a Berkshire Hathaway, Inc. company, is the innovator behind the FlowGuard Gold CPVC technology. Lubrizol is a technology-driven global company that combines complex, specialty chemicals to optimize the quality, performance and value of products. ●
